Mediaș, Romania · remote or hybrid

Automation engineer who builds systems that keep running after handover. Four years at Atos building and maintaining enterprise automation, then production agentic AI: LangGraph pipelines, LLM decision layers and human-in-the-loop approvals inside live operations. I speak the language of operations and the language of agents. B2B contract engagements through FLOWENTIC S.R.L.

EXPERIENCE

AUG 2026 — NOW

Founder · FLOWENTIC S.R.L., Mediaș

Builds operational systems for companies and hands them over to production.

- **Custom operational workflows:** one bounded flow, connected to the client's existing systems, with human checkpoints where a decision is needed, an audit trail on every step and documented handover.
- **Kitchen,** a loss-measurement system for professional kitchens: connected scale with keypad and radio, weighing events in PostgreSQL, automatic end-of-day loss report; scale simulator and about 65 automated test files.

Python · TypeScript · PostgreSQL · Docker · LangGraph · n8n · microcontroller firmware

JUN — AUG 2026

AI Integration Engineer · B2B operations platform for manufacturers

- **End-to-end agent workflows** replacing manual coordination between sales, logistics and procurement.
- **Predictive replenishment:** LangGraph and FastAPI pipelines forecasting raw-material needs before stock-outs.
- **Human-in-the-loop by design:** agents act alone where risk is low and escalate where it is not; every decision traceable.
- **Production reliability:** tracing and metrics on agent runs; retries, fallbacks and idempotency so failures degrade safely.

LangGraph · FastAPI · Python · LLM APIs · RAG · Redis · Docker · n8n · Langfuse

APR — JUN 2026

AI Engineer · Atos

- Moved from RPA to AI engineering: agent workflows, RAG and data processing in Python, LangChain, OpenAI APIs, vector databases and n8n.
- Carried enterprise standards (monitoring, error handling, auditability) from RPA into agent design; runbooks for distributed teams.

HOW TO WORK WITH ME

B2B contract. Embedded in your team for a defined period, contracted and invoiced through FLOWENTIC S.R.L. Remote or hybrid.

One workflow, delivered. Scoped, built end to end and handed over running: flowentic.com

EXPERIENCE · CONTINUED

MAY 2022 — APR
2026

RPA Developer · Atos

- **UiPath**: built, deployed and maintained enterprise robots across live business processes for teams in India, Germany and the United States, cutting manual workload by up to 85%.
- **Maintenance at scale**: maintained 320+ production workflows and coordinated the maintenance team; ran code reviews and set team standards, so a stopped process was fixed before it blocked operations.
- **Handover**: documented parameters, technical specs and SOPs so the next engineer never starts from zero.
- **n8n and Python**: integration layer between robots and business systems; data cleaning, parsing and validation on business-critical datasets.
- **Continuous improvement**: up to 80% savings in processing time and operating cost.

UiPath · n8n · Python · REST APIs · Azure · SOP and technical documentation

2012 — 2020

Chef / Team Coordinator · Germany and Mediaș

- Led teams of up to 20 people in high-pressure operations, 100 to 300 covers a day, responsible for goods ordering per event. The operational discipline behind the engineering work was built here.

SELECTED AI PROJECTS · 2026

AI On-Call, voice agent for IT support. Twilio, LangGraph and n8n: calls the customer when an ITSM ticket opens, verifies identity, writes the work note back to the ticket. Recorded demo on the portfolio.

Production RAG service. Multi-tenant hybrid-search API (FastAPI, Qdrant, Redis, Langfuse), async ingest with dead-letter handling, role-based access with JWT. github.com/georgelush/rag-system

Agent orchestrator, live. LangGraph routes each request to a specialist agent (RAG Q&A, Gmail, Calendar, Telegram); human-in-the-loop approval via Telegram with Redis state.

TECHNICAL SKILLS

Automation and integration. UiPath (enterprise RPA), n8n, process automation, SOP design, REST APIs, ITSM, Twilio, Google and Telegram APIs.

Agentic AI and LLM. LangGraph, LangChain, multi-agent orchestration, human-in-the-loop, RAG, hybrid search, vector databases, Langfuse, OpenAI and Groq APIs.

Backend and data. Python, FastAPI, PostgreSQL, Redis, Qdrant, Docker, CI/CD, Prometheus, Azure; data cleaning and transformation.

Systems and security. Networking fundamentals, Linux administration, TryHackMe labs (top 3%); C++ and Java fundamentals, OOP, algorithms.

Ways of working. AI-assisted development, technical documentation. English (professional), Romanian (native).

TRAINING AND CERTIFICATIONS

AI Engineer for Developers. DataCamp certification, March 2026 (ID AIEDA0019097326736).

WellCode, intensive programming mentorship. Instructors from Meta, Google and Palantir; C++ and Java fundamentals, OOP, algorithms, 200+ coding challenges solved.

TryHackMe. Top 3% globally within three months (2025 to 2026); networking, Linux, web exploitation, privilege escalation.
