PROFESSIONAL SUMMARY

AI Agentic Automation Engineer specializing in building autonomous multi-agent systems that reason, adapt, and execute complex workflows independently. Proven track record transitioning from enterprise RPA to cutting-edge Agentic AI — designing production-grade systems with LangGraph, FastAPI, RAG pipelines, and Human-in-the-Loop orchestration. Currently building intelligent automation infrastructure at stock.link, the operational layer for manufacturers. Combines deep process-automation expertise with a builder mindset: ships real systems, not prototypes.

CURRENT ROLE

stock.link — AI Integration Engineer

June 2026 – Present

stock.link is the operational layer for manufacturers — handling marketing, sales, logistics, and raw-material replenishment through a single API.

- ▶ Designing and implementing AI agent workflows that automate end-to-end manufacturer operations via a unified API platform
- ▶ Building agentic pipelines for predictive material replenishment using LangGraph and FastAPI
- ▶ Integrating LLM-powered decision layers into logistics and sales automation flows
- ▶ Architecting Human-in-the-Loop approval systems for critical operational decisions
- ▶ Collaborating with cross-functional teams to deliver scalable, production-ready AI integrations

PROFESSIONAL EXPERIENCE

ATOS — RPA Developer — AI Automation Team

May 2022 – June 2026

- ▶ Built and debugged autonomous agents using Python — reduced manual workload by up to 85%
- ▶ Designed scalable automation processes and systems supporting business growth and increased operational demand
- ▶ Managed and processed large datasets: cleaning, transformation, and structuring for business analysis
- ▶ Identified and delivered continuous automation improvements saving up to 80% in time and costs
- ▶ Created technical documentation for automation workflows and collaborated with global teams
- ▶ Transitioned from classical RPA to Agentic AI — building systems that reason and adapt autonomously

MUMMELSEE — Chef

Apr 2018 – May 2020

- ▶ Delivered high-quality production for 100+ daily servings in high-pressure environment
- ▶ Built multicultural teamwork and communication skills — directly applicable to distributed tech teams

REYA EVENT CLUB — Chef / Team Coordinator

May 2012 – Dec 2017

- ▶ Coordinated teams of 20 people — developed leadership, process optimization, and rapid decision-making

KEY PROJECTS (2026)

AI Agent Orchestrator — Live demo on portfolio

- ▶ Multi-agent system with LangGraph orchestrator routing to 6 specialized agents
- ▶ Human-in-the-Loop calendar approval via Telegram Bot with Upstash Redis state management
- ▶ RAG pipeline (ChromaDB + sentence-transformers) answering questions about my background
- ▶ SSE streaming for live visual orchestration — deployed on Hugging Face Spaces Docker

Production RAG Service — github.com/georgelush/rag-system

- ▶ Multi-tenant RAG API: hybrid dense+sparse search (RRF), cross-encoder reranking, streaming SSE
- ▶ Async ingest queue with DLQ, namespace RBAC + JWT, Prometheus metrics, Langfuse tracing
- ▶ 13 file formats including audio via Whisper — full 2026 RAG stack

AI On-Call — Voice Agent for IT Support — Pilot Case

- ▶ Outbound voice AI using Twilio + LangGraph: calls customer when ITSM ticket opens
- ▶ Verifies identity via 6-digit code, collects work note + ETA, pushes back to ITSM via n8n

TECHNICAL SKILLS

Agentic AI: LangGraph · LangChain · Multi-Agent Orchestration · HITL · Autonomous Workflows
AI / ML: RAG · Vector Databases · Embedding Models · Prompt Engineering · LLMs · Langfuse
Backend: FastAPI · Python · REST APIs · SSE Streaming · Docker · Docker Compose · CI/CD
Automation: RPA Tools · n8n · Process Automation · Workflow Design · SOP Development
Data & Storage: Qdrant · ChromaDB · Redis · Upstash · Azure · Data Engineering
Integrations: Twilio · Gmail API · Google Calendar API · Telegram Bot API · FastMCP
Dev Tools: VS Code · GitHub · Claude CLI · Vibe Coding · AI-assisted Development

LangGraph	FastAPI	Docker	RAG	Qdrant	n8n	Langfuse	Twilio
ChromaDB	Redis	LangChain	Python	HITL	SSE	Azure	FastMCP

EDUCATION & CERTIFICATIONS

AI Engineer for Developers

DataCamp Certification — AIEDA0019097326736

March 2026

WellCode Programming Mentorship Program

- ▶ C++, Java fundamentals, OOP, algorithms — 200+ coding challenges completed
- ▶ Web applications using JavaScript (frontend logic, APIs, interactivity)

ADDITIONAL INFORMATION

Languages: Romanian (Native) | English (Professional Working Proficiency)

Key Achievements: Reduced manual workload by 85% through automation | Solved 200+ algorithmic problems | Built and shipped 3 production AI systems in 2026
